1	Explanation of Building Process	1
1.1	Problem 1	1
1.2	Problem 2	1
1.3	Problem 3	1

1 Explanation of Building Process

- Follow the instruction at <https://bookdown.org/yihui/bookdown/get-started.html>
- Actually, although we can fix most error by downloading the packages from Tools in RStudio, there were some problems during building this process.

1.1 Problem 1

`devtool <- CRAN` does not support this package, so we have to install it directly from ‘github’ using `'devtool::install_github()'`.

1.2 Problem 2

the latest version of Rtools <- In my case, I installed the latest version of Rtools 3.5.1 for building process

1.3 Problem 3

`system.time(mclapply(1:10, pause(0.25), mc.cores = cores))` is not support by Windows. I followed the recommendation of one of the students. I did first set up a local cluster and then use `parLapply(): \indexc{mclapply()} \indexc{parLapply()}`
